WELCOME TO MOTOR POWER COMPANY

The brushless servomotor is a product of tried-and-tested success that Motor Power Company manufacturers thanks to in-company know-how acquired during years of practical experience with designing and building motors.

TETRA COMPACT belongs to the low power range and stands out for its constructional shape; TETRA is the brushless servomotor with excellent efficiency along with high torque rate, thanks to the intrinsic technology that gets the most out of the magnetic material. The original construction of the rotor part (patented) permits two possible inertia executions on the same motor size by ensuring an optimum dynamic response even with different load masses. These servomotors are particularly suitable for positioning tasks in industrial robotic, machine tools, actuators and machine automation with demanding requirements in terms of dynamics and stability. Motor Power Company proposes not just components but complete motion solutions, combining brushless servomotors with a series of drives with high flexibility and exceptional capabilities in a wide range of applications.
